Enterprise Standards and Best Practices for IT Infrastructure

## **Lab Assignment 05**

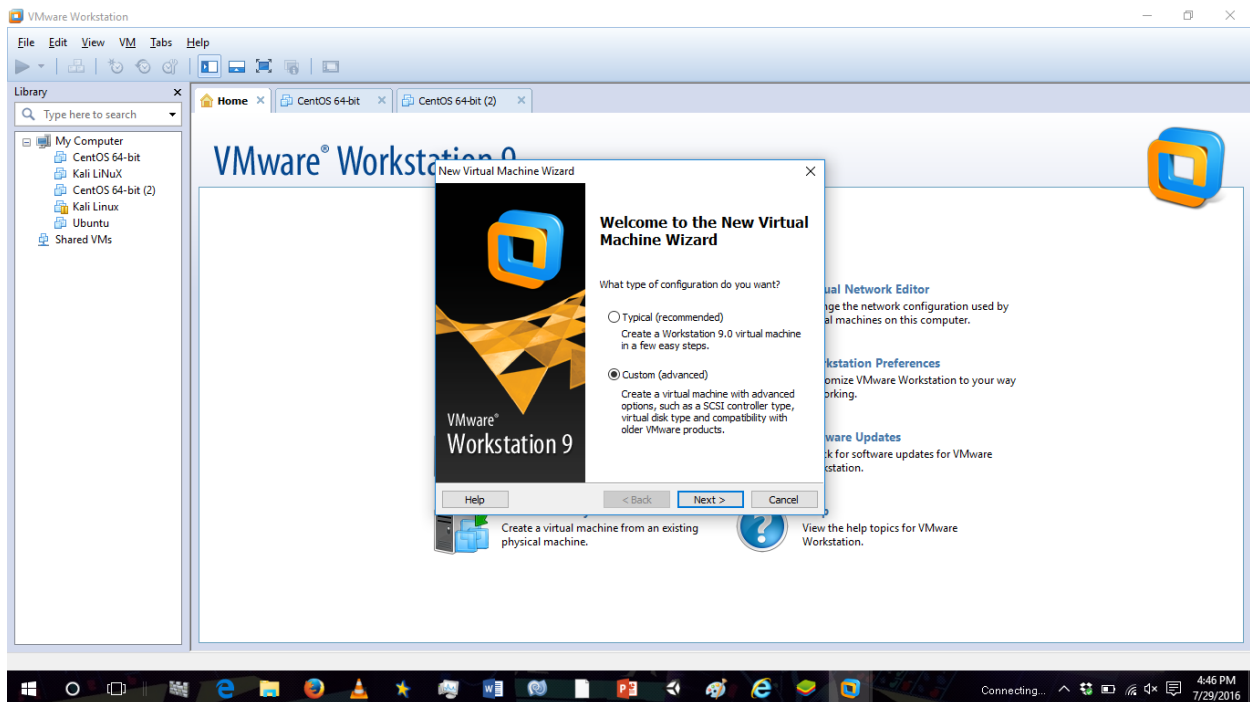

### **Configuring Kali Linux on Hypervisor**

**Perera M.A.L.P**

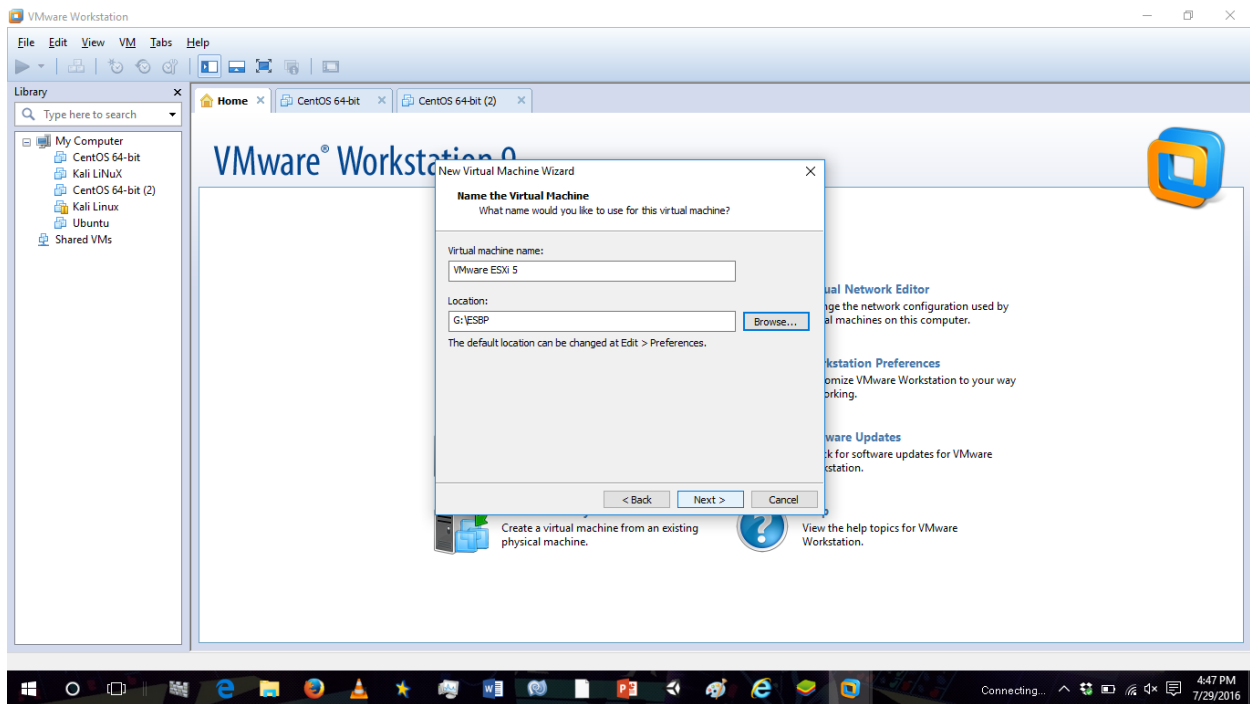

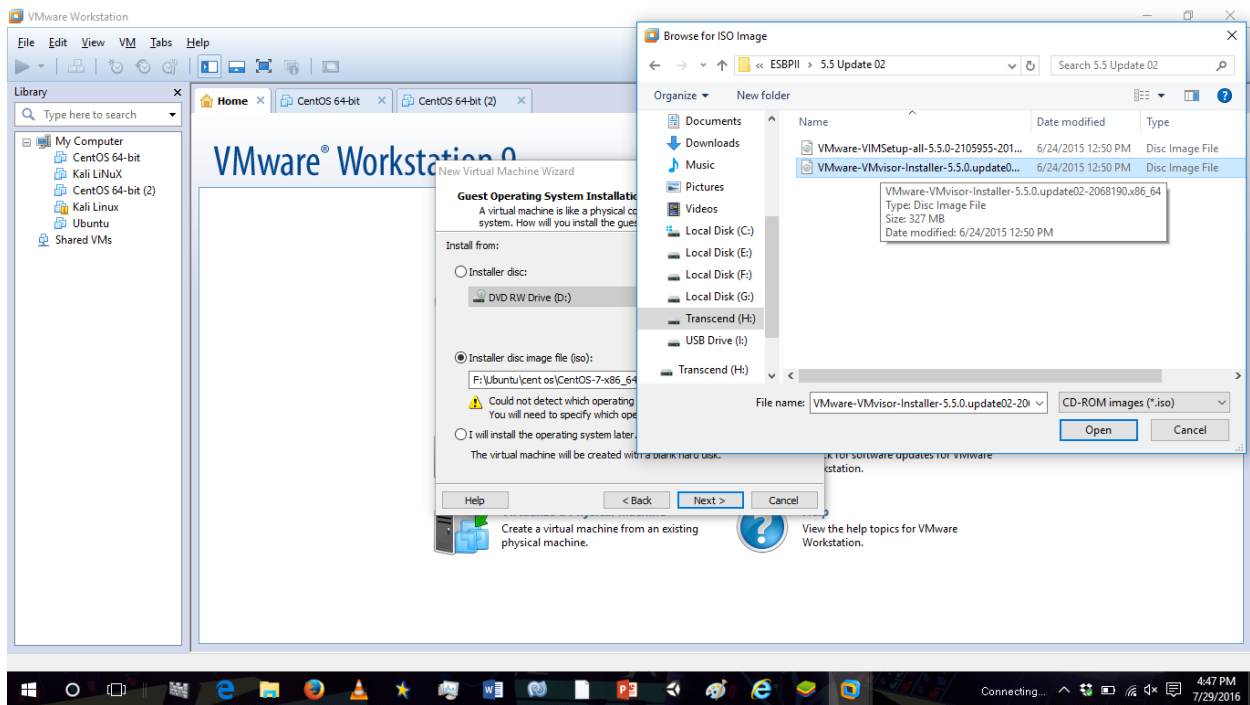

**IT13050436**

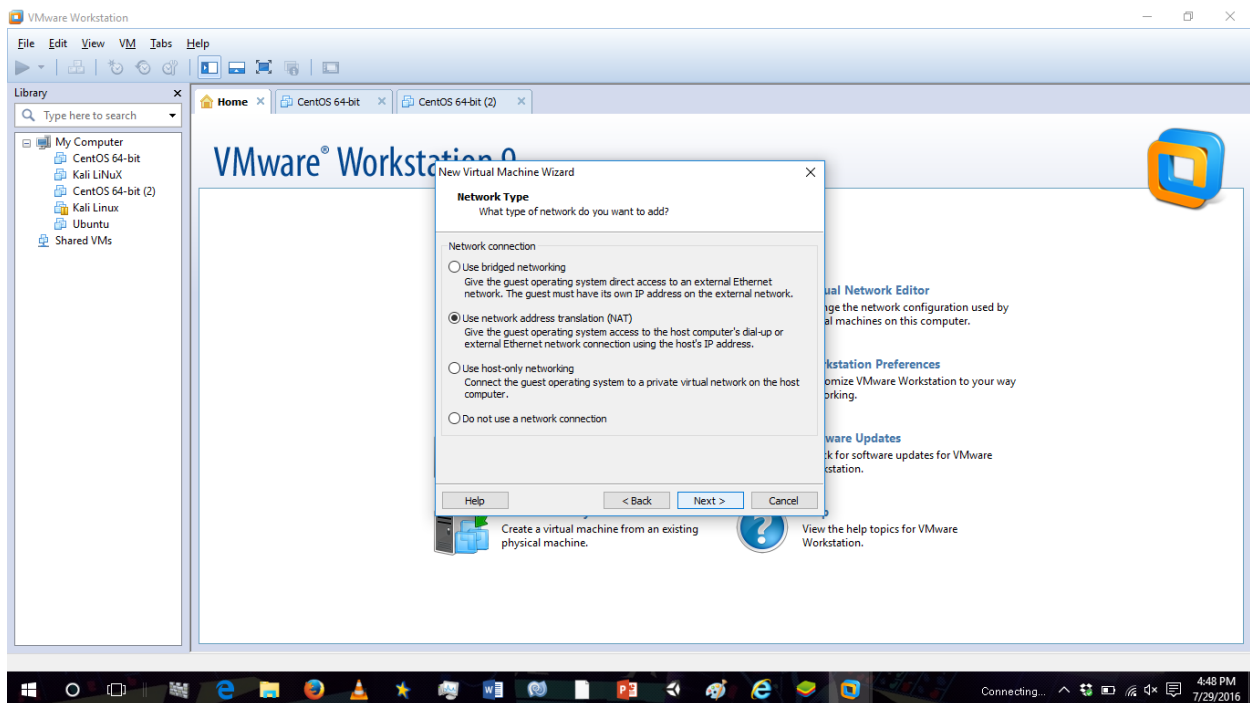

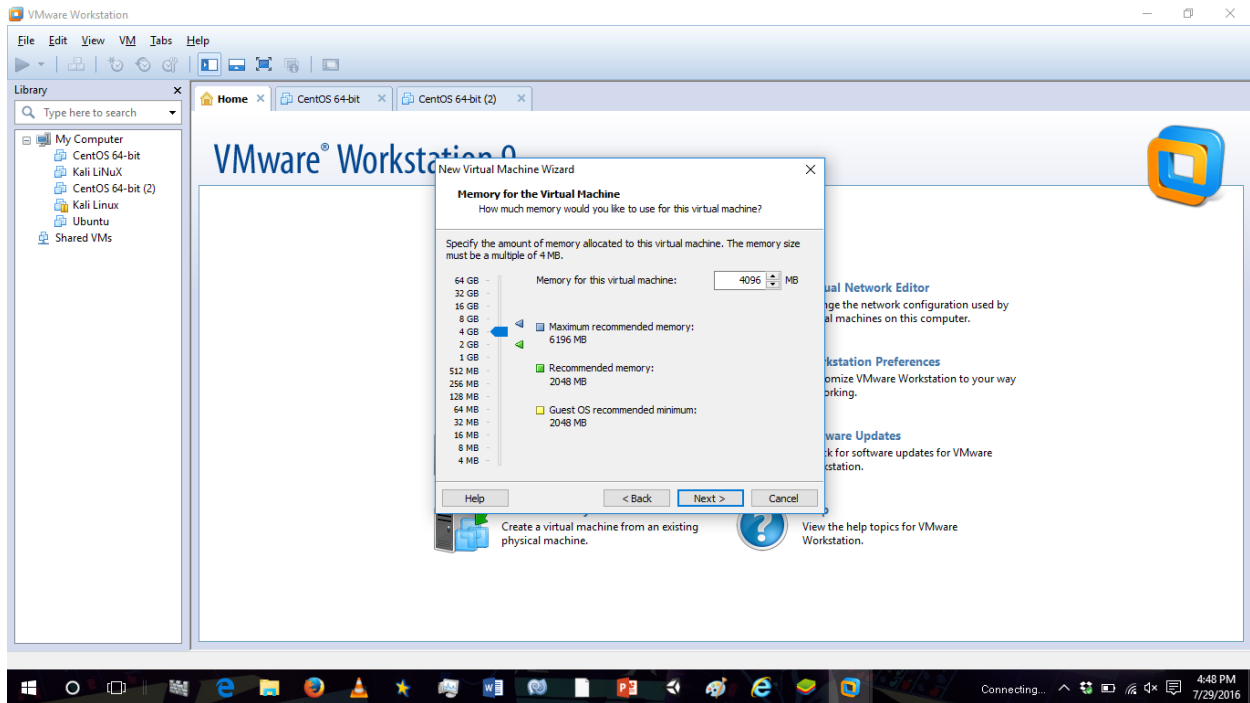

**WD**

Select “Installer disk image file” and browse for “VMware VMvisor Installer”, and select “Next”.

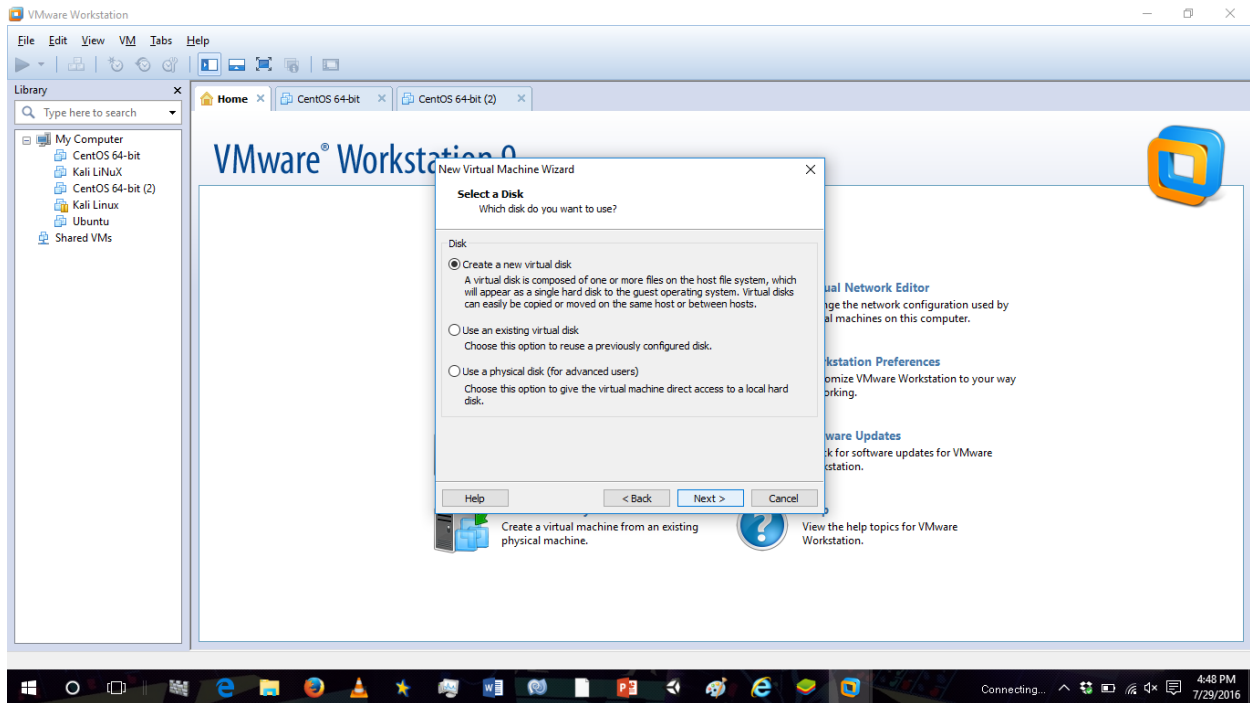

Give Location and select “Next”.

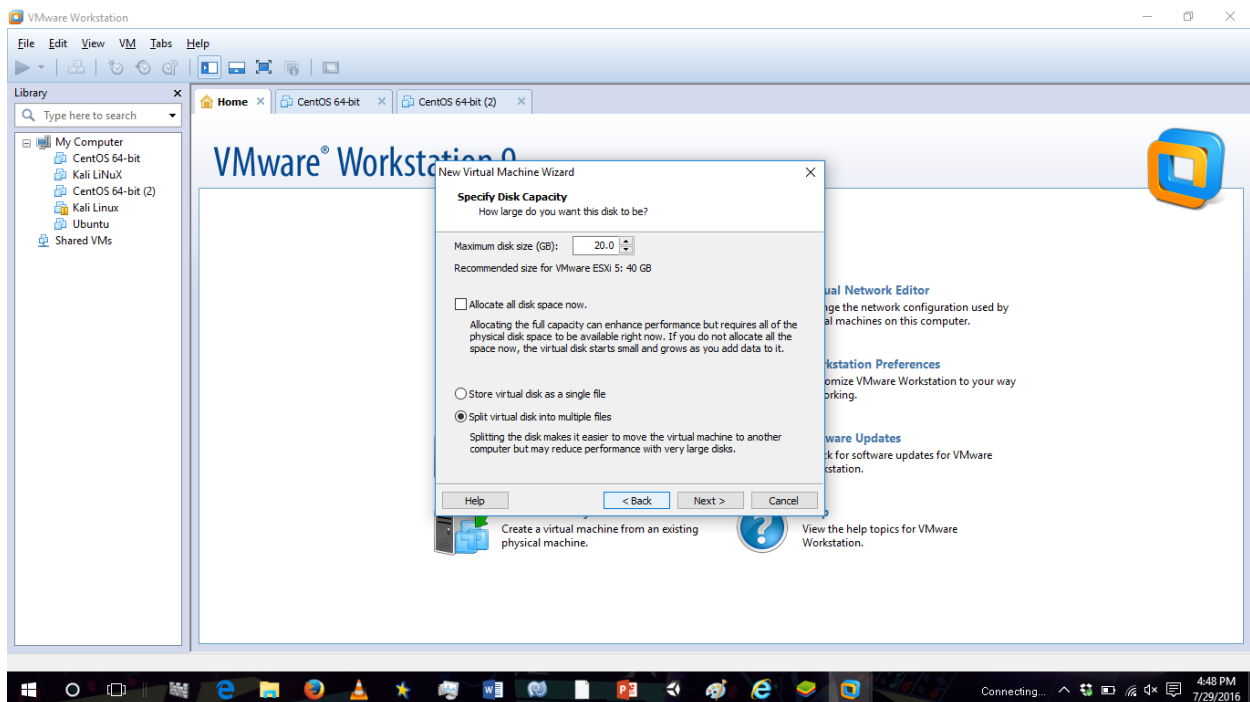

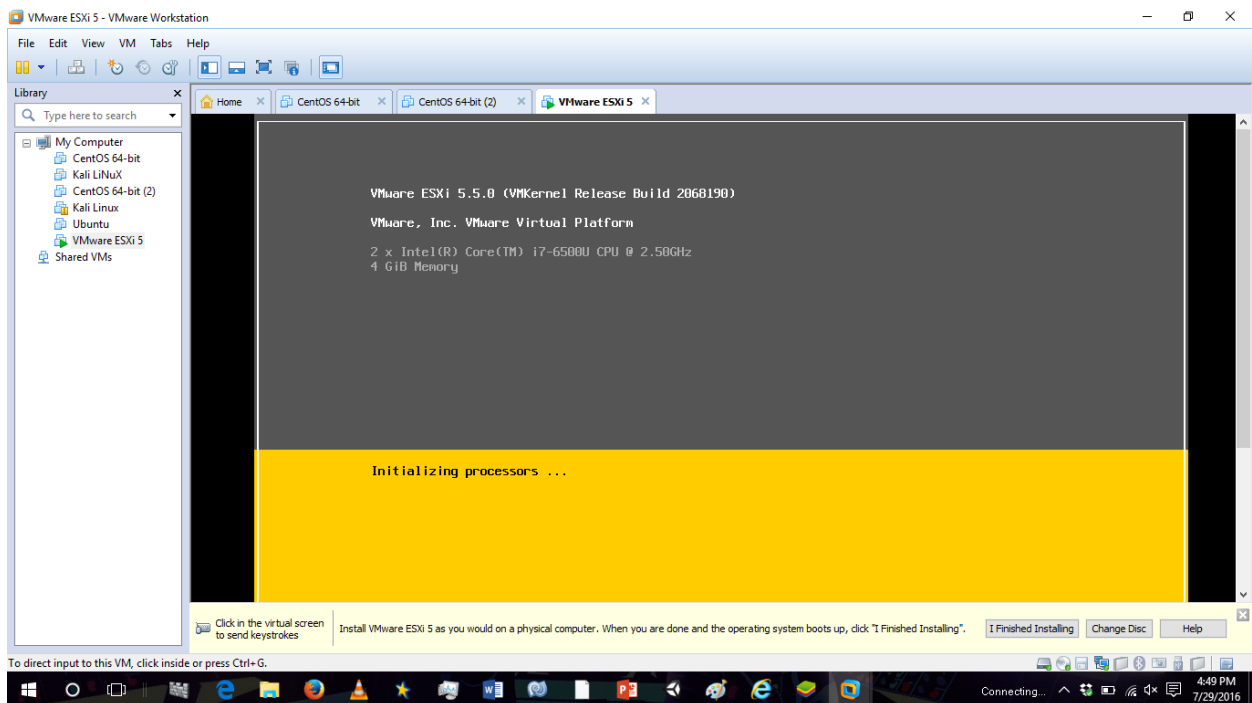

Click Next.

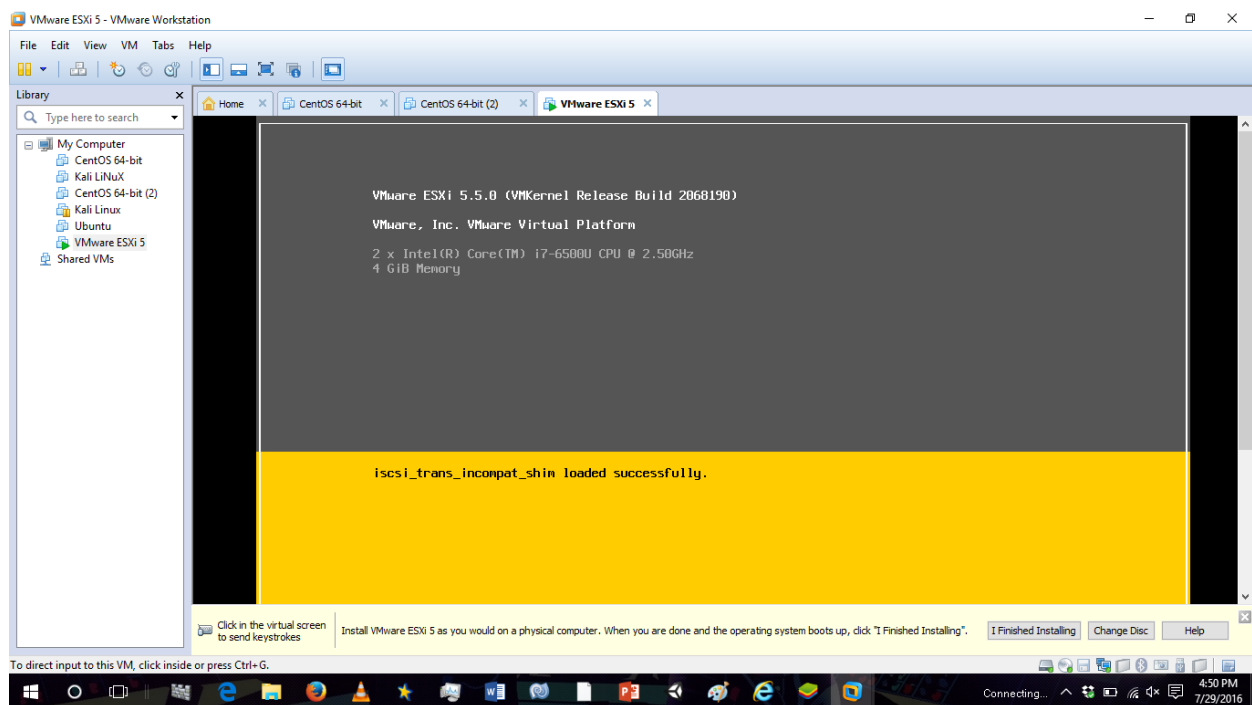

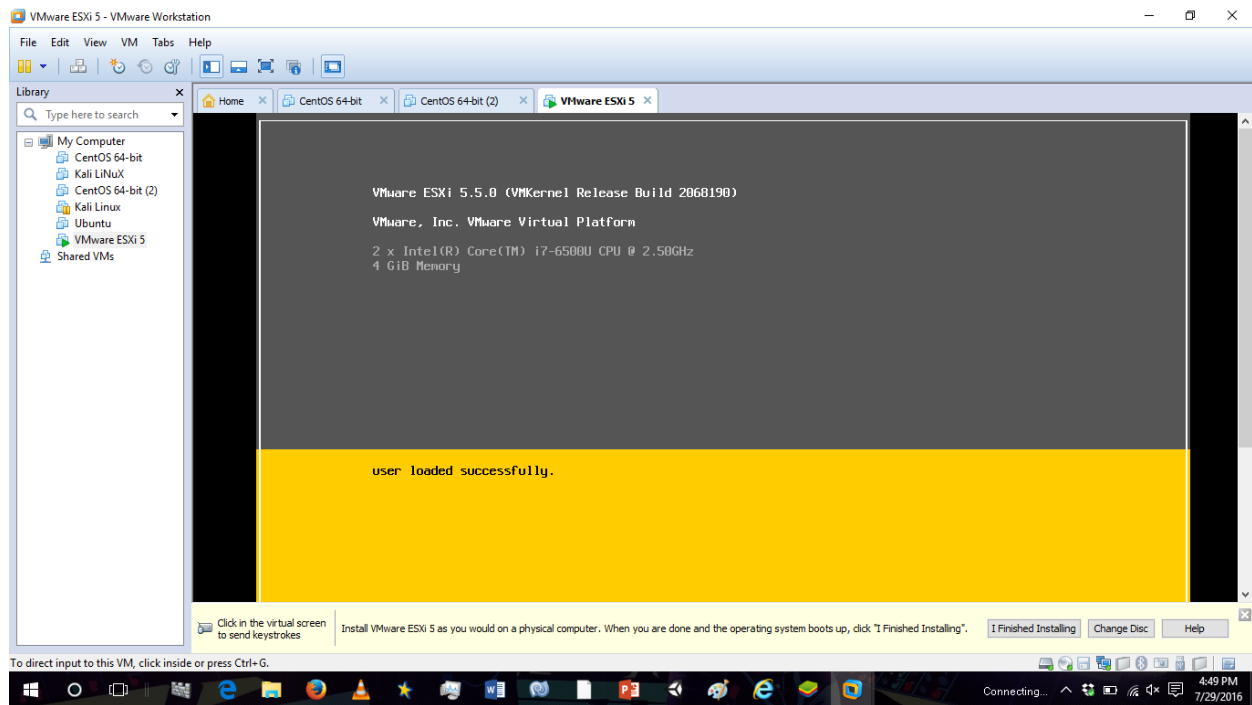

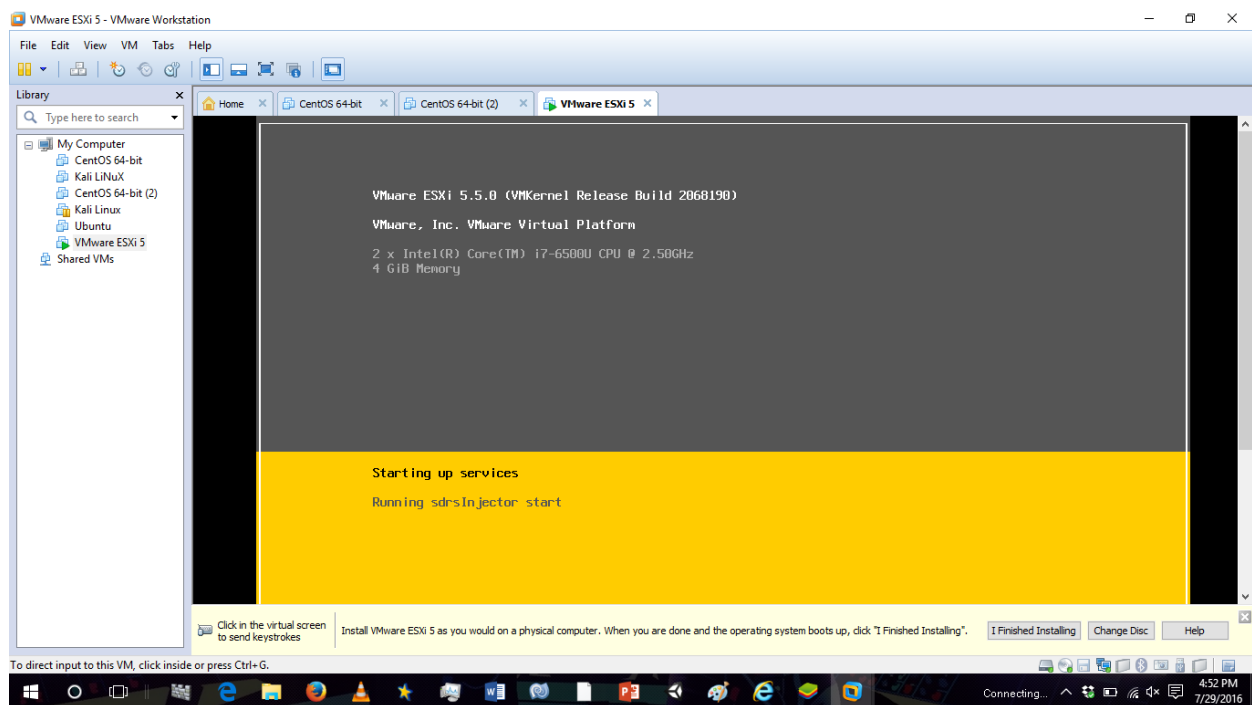

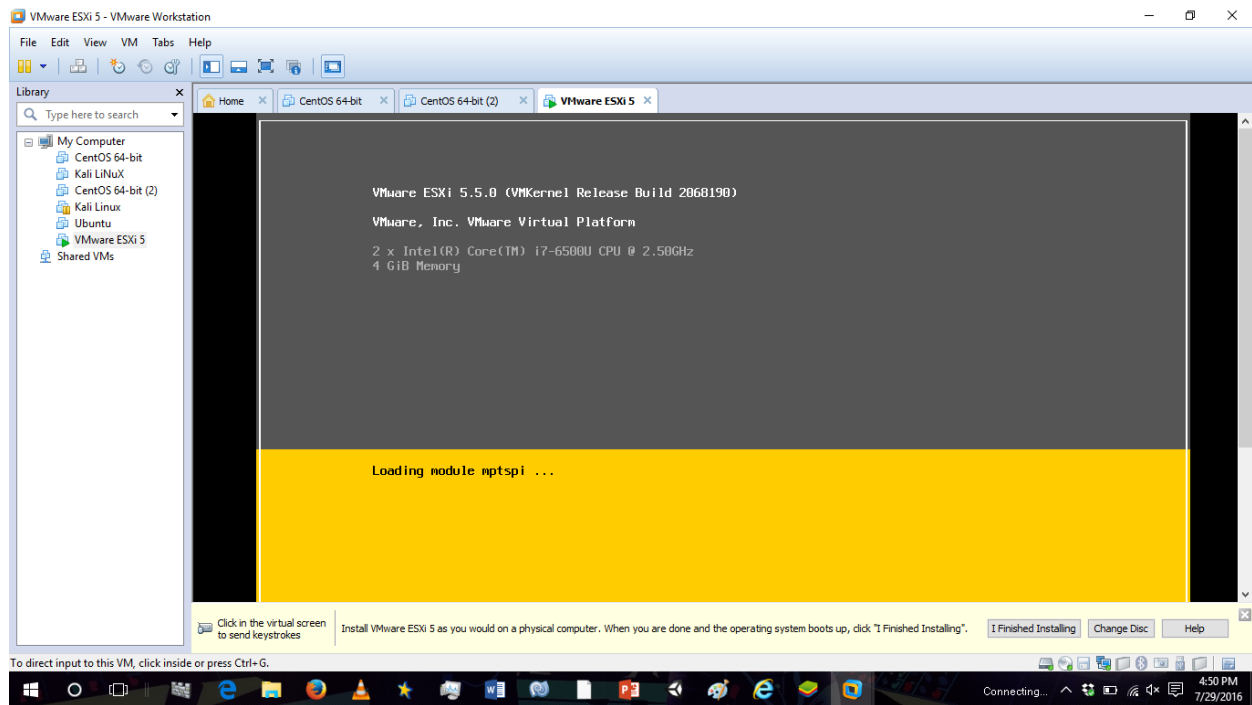

Select “Store virtual disk as an image file” and click “Next”. Click Finish.

Click Power On in VMware.

**Scanning System.**

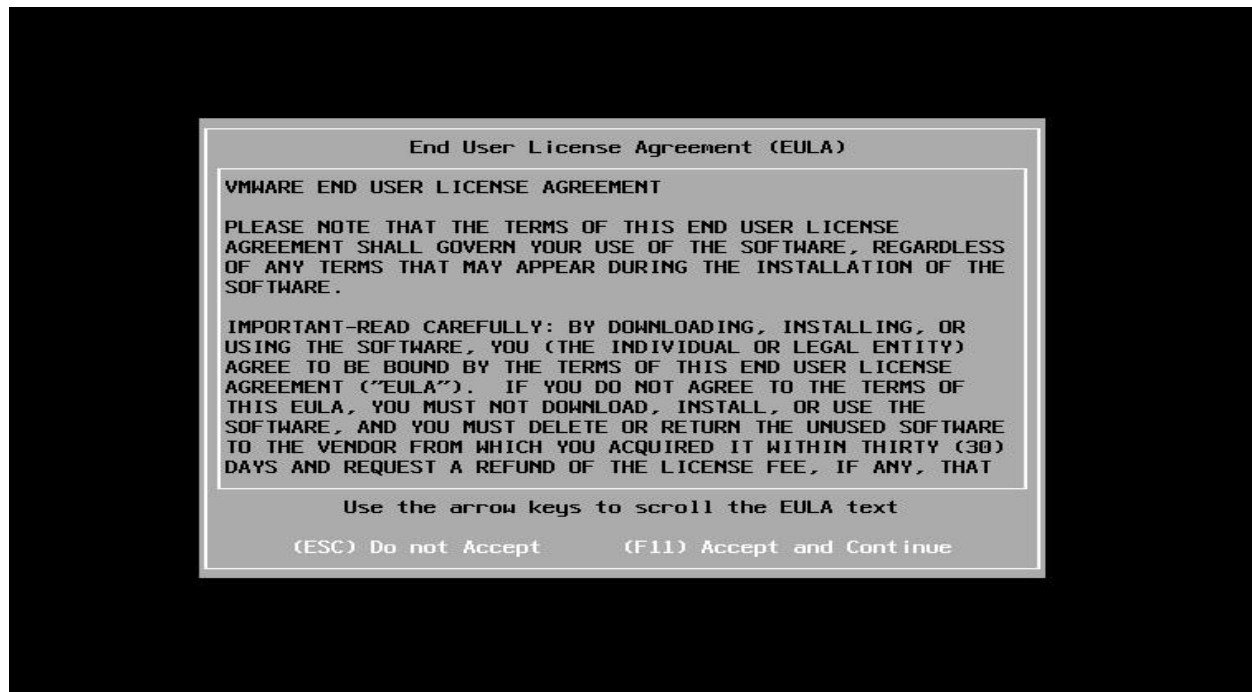

**Press F11 to Confirm and Install.**

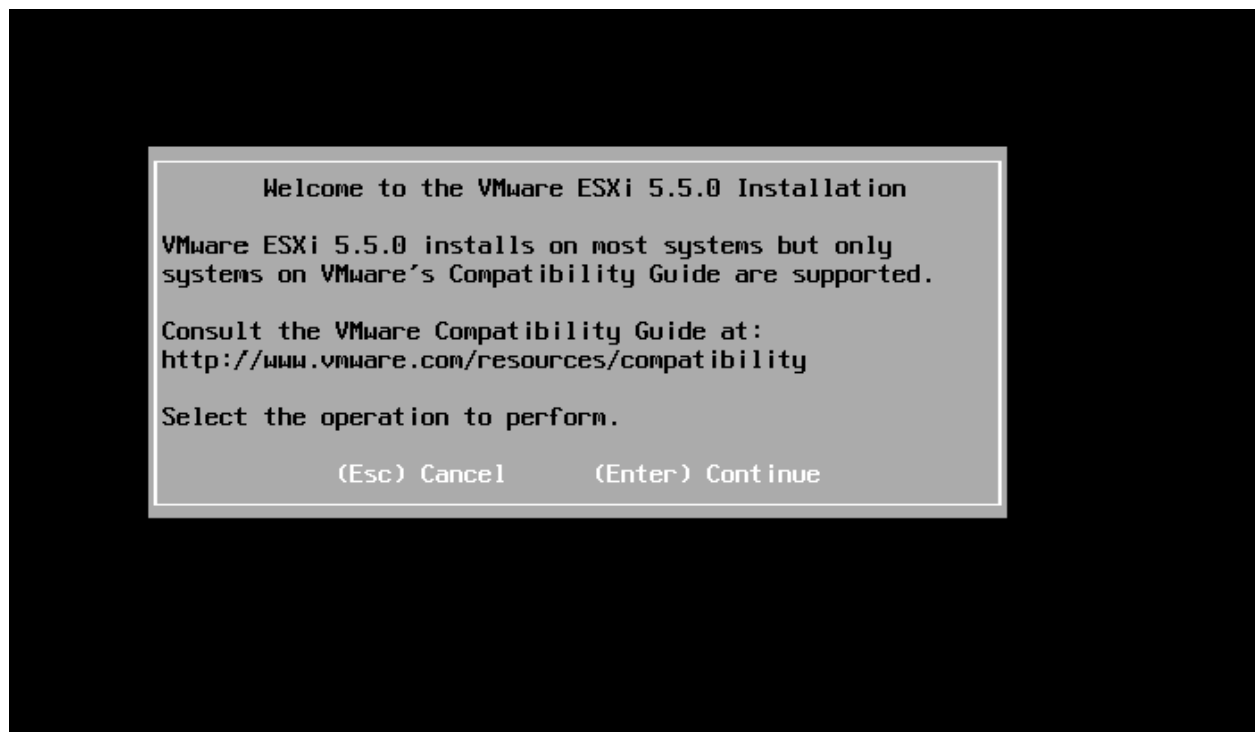

**Installing in Progress.**

**Press F11 to Accept and Continue.**

**Enter Continue.**

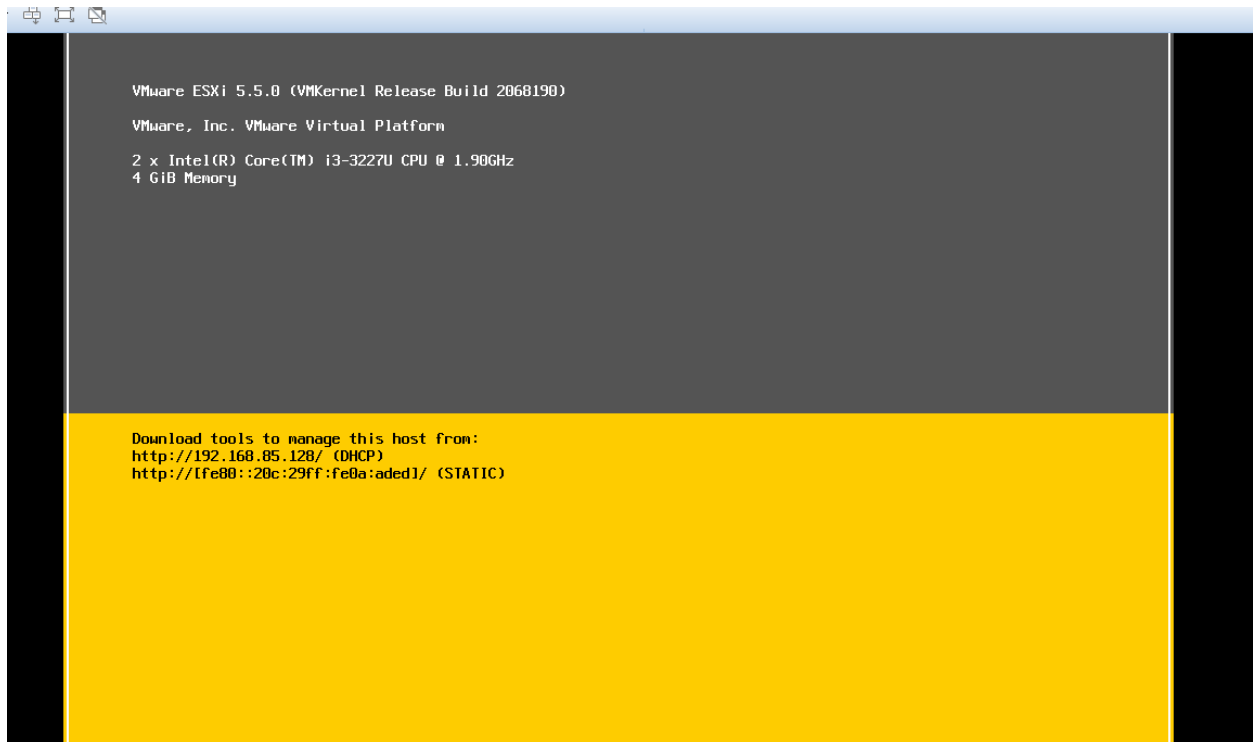

Give a password for "Root password" then confirm it and press "Enter".

Press F11 to Install.

Host IP address is given below. Select that link and download “VMware VClient”.

Now go to that downloaded file and run it. Install that VMware vSphere.

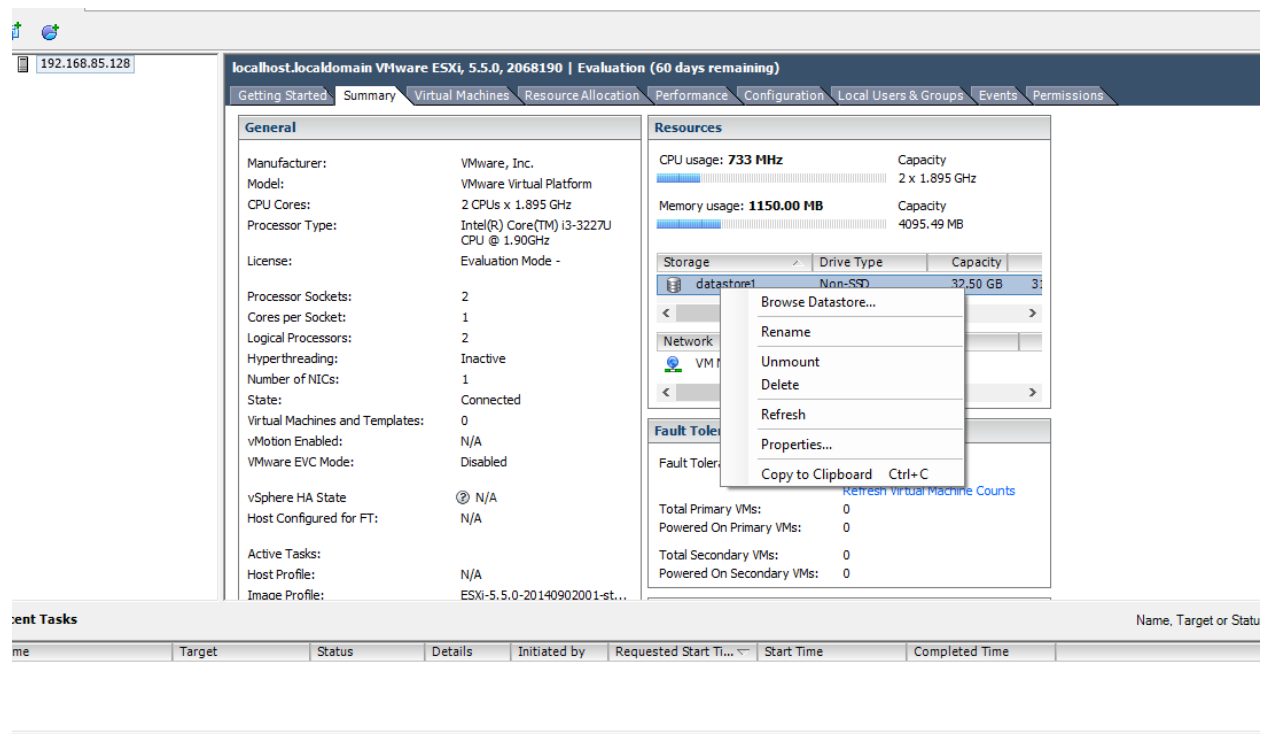

After installed, run it. This Window will Display. Provide host IP address previously shown and fill username as “root” and fill the password previously given. Click “Login”.

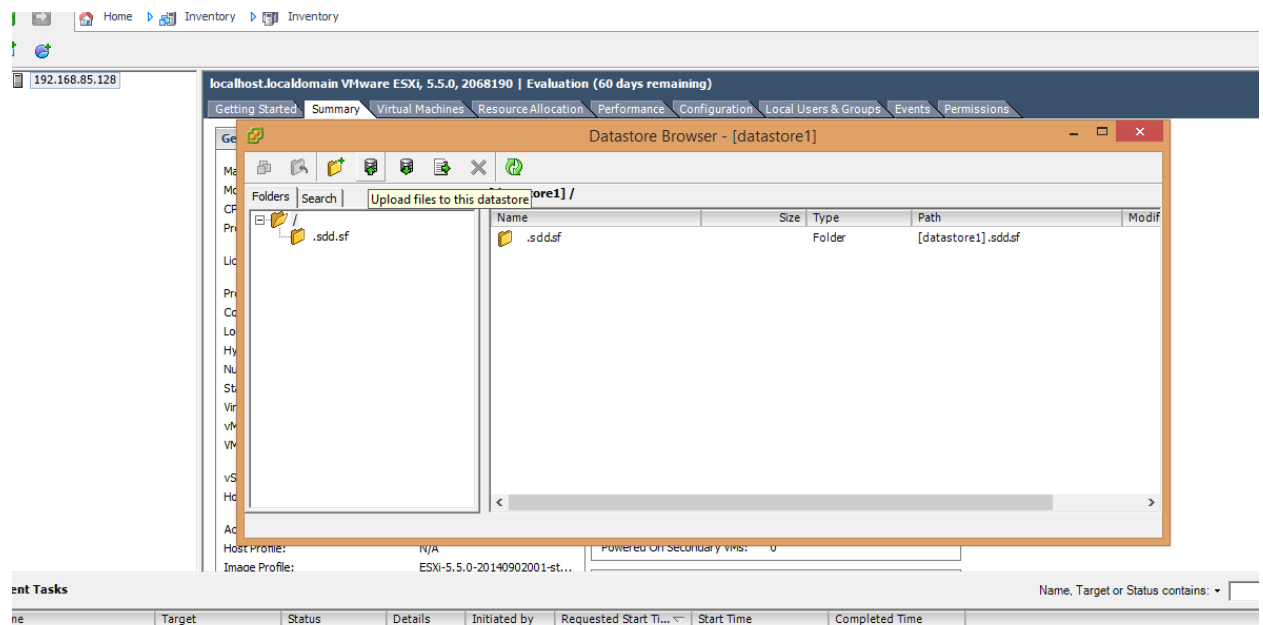

This Window will Display.

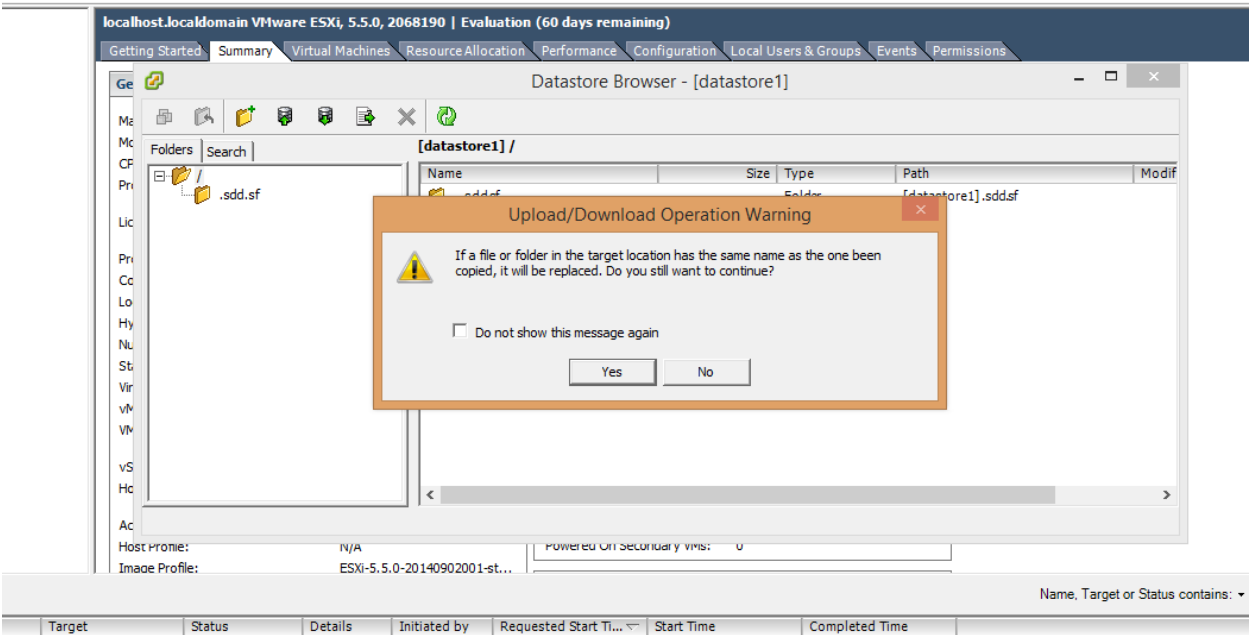

Right click “databases” and select “Browse Database”.

As shown below select “Upload File” and browse for “Kali Linux”.

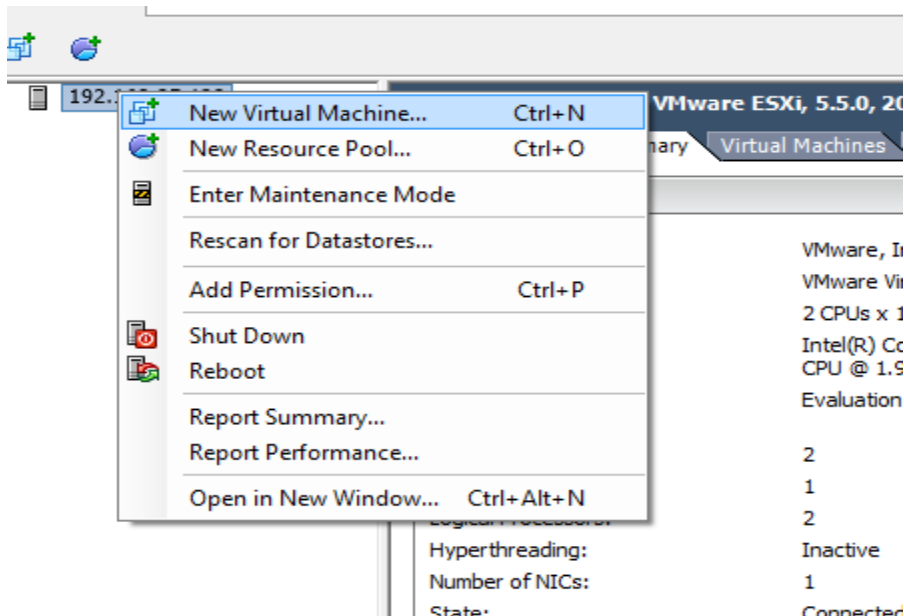

Select “Yes”.

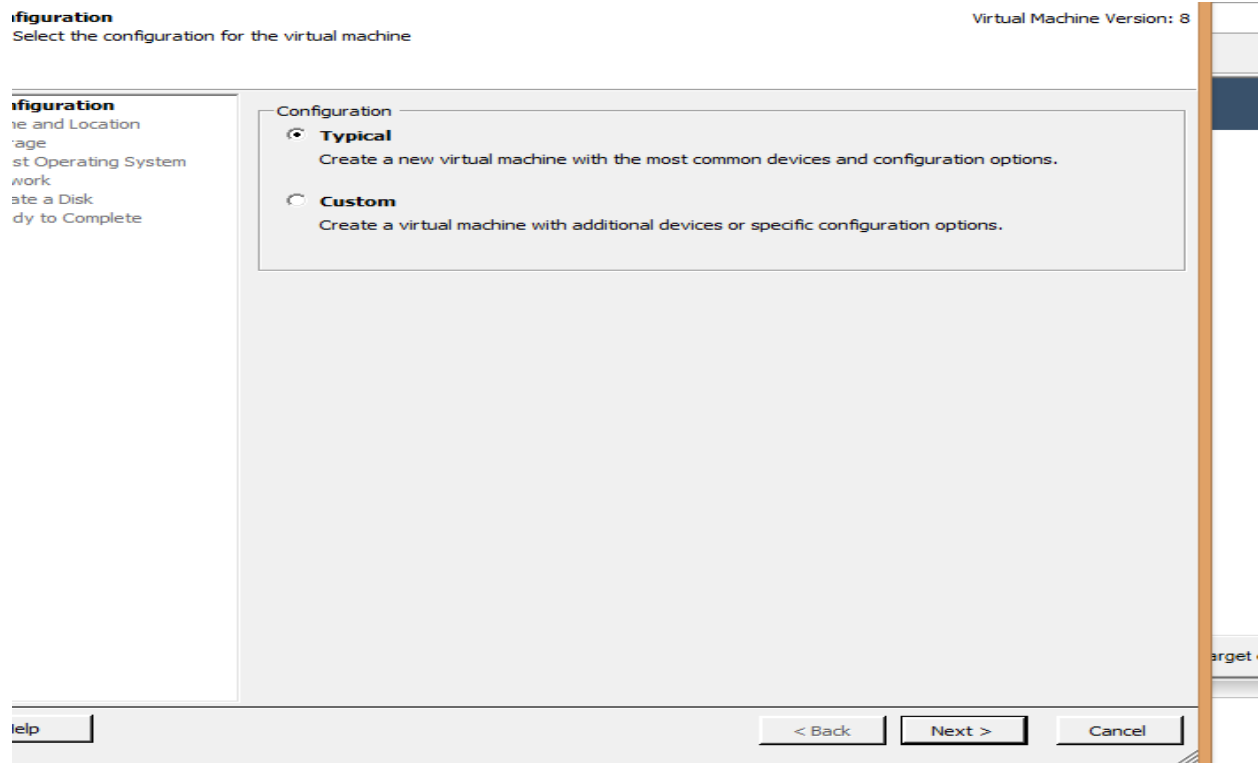

Linux will display here.

Go to the IP address shown on and right click then select “New Virtual Machine”.

Select “Typical” and then click “Next”.

Select “Linux” and from the dropdown list select “Other Linux (32 bit)”. Select “E100” as Adapter and click “Next”.

**Network** Virtual Machine Version: 8  
Which network connections will be used by the virtual machine?

[Guest Operating System](#)  
**Network**  
Create a Disk  
Ready to Complete

Create Network Connections

How many NICs do you want to connect? 1

	Network	Adapter	Connect at Power On
NIC 1:	<span>VM Network</span>	<span>E1000</span>	<input checked="" type="checkbox"/>

 If supported by this virtual machine version, more than 4 NICs can be added after the virtual machine is created, via its Edit Settings dialog.

Adapter choice can affect both networking performance and migration compatibility. Consult the [VMware KnowledgeBase](#) for more information on choosing among the network adapters supported for various guest operating systems and hosts.

[Guest Operating System](#)  
[Network](#)  
[Create a Disk](#)  
**Ready to Complete**

Settings for the new virtual machine:

Name:	gayan
Host/Cluster:	localhost.localdomain
Datastore:	datastore1
Guest OS:	Other Linux (32-bit)
NICs:	1
NIC 1 Network:	VM Network
NIC 1 Type:	E1000
Disk provisioning:	Thin Provision
Virtual Disk Size:	8 GB

☐ Edit the virtual machine settings before completion

Creation of the virtual machine (VM) does not include automatic installation of the guest operating system. Install a guest OS on the VM after creating the VM.

### What is a Virtual Machine?

A virtual machine is a software computer that, like a physical computer, runs an operating system and applications. An operating system installed on a virtual machine is called a guest operating system.

Because every virtual machine is an isolated computing environment, you can use virtual machines as desktop or workstation environments, as testing environments, or to consolidate server applications.

Virtual machines run on hosts. The same host can run many virtual machines.

### Basic Tasks

- [Power on the virtual machine](#)
- [Edit virtual machine settings](#)

Target	Status	Details	Initiated by	Requested Start Time	Start Time	Completed Time
guyan	Completed		root	29/07/2016 14:23:37	29/07/2016 14:23:37	29/07/2016 14:23:37
192.168.85.128	Completed		root	29/07/2016 14:20:56	29/07/2016 14:20:56	29/07/2016 14:20:59

Name, Target or Status contains:  Clear

Evaluation Mode: 60 days remaining | root

Go to the console you can see Kali Linux is running.
